

**VAC  
612**

**Vacuum Coater**

**for Water-Born Coatings**

**Power of Simplicity**

You can install the VAC 612 in-line with your current moulder, roll former or extruder. Adding a Delle Vedove HIR high intensity IR oven you can have a complete turnkey priming system.

Our equipment is designed for trouble-free-operation and minimum down time. Stainless steel construction allows fast clean-up and coating changeover.

**Versatility**

The 612 uses only waterborne coatings, accomodating minimal VOC emissions in accordance with increasingly strict air quality standards.

This unit is available with optional equipment, depending on your application.

The in-feed conveyor 600BL allows lineal feeding of substrate.

The double fluid filter screens out wood particles while allowing filter cleanup without down time.

Our patented shroud allows you to put coating only on selected surfaces of the part that need coating.

In short the 612 saves you money on coating while increasing your production capabilities

**Over 400  
Machines Operating  
Worldwide**

The Delle Vedove 612 Series vacuum coater is the "workhorse" that can prime, stain or topcoat linal substrate with uniform profiles up to 12" wide and with virtually 100% transfer efficiency.
