- ▷ Adjustable to the profile
- ▷ Safety cover with electric door locks
- ▷ Multiple stations are possible
- ▷ Profile length adjustable
- ▷ Heavy duty feed chain
- ▷ This machine can be added at a later stage

In-Line finish cutting

This machine is used for cutting the profiles to length. The profiles are cross fed through the saw stations by means of chains and dogs to assure a square cut. All units are mounted to heavy duty dovetail supports. Digital indicators are provided. The machine can be configured with multiple stations to add scoring saws or shaping units.

This machine can also be configured for sanding and foiling the ends of the profiles in line with the profile wrapping machines. One side of the machine is fixed and one side is adjustable for accommodating different profile length.

All units are adjustable to the profile contour. Safety covers are provided.
